TWEED ROAD CONTRIBUTION PLAN

CP No 4

VERSION 5.0

March 2007

(Intentionally blank)

CERTIFICATION:

This ***Tweed Road Contribution Plan (CP No 4 - Version 5.0)*** was adopted by Tweed Shire Council on [? April 2007] and became effective on [? May 2007].

Pursuant to Clauses 31 and 32 of the Environmental Planning and Assessment Regulation 2000, the following contribution plans are repealed by the approval of this Tweed Road Contribution Plan (being a subsequent plan):

- Tweed Road Contribution Plan (CP No 4 Version 4.1)
- Tweed Road Contribution Plan (CP No 4 Version 4.2)
- Tweed Road Contribution Plan (CP No 4 Version 4.3)
- Tweed Road Contribution Plan (CP No 4 Version 4.4)
- Tweed Road Contribution Plan (CP No 4 Version 4.5)
- Tweed Road Contribution Plan (CP No 4 Version 4.6)
- Tweed Road Contribution Plan (CP No 4 Version 4.8)
- Tweed Road Contribution Plan (CP No 4 Version 4.9)

EXECUTIVE SUMMARY

This Contributions Plan enables Tweed Shire Council to levy s.94 developer contributions for the provision of additional road capacity to service increased traffic loading as a result of urban growth and/or development demands. It also permits Council to recoup past expenditures in the road network made in anticipation of development throughout the entire Tweed Shire.

According to the *Tweed 4/24 Strategic Plan 2004-2024* (Sept. 2004), the population on the Tweed could potentially reach 120,000 persons by 2024. Further, it has previously been estimated that the zoning provisions in the current *Local Environmental Plan 2000* could, ultimately, provide for a population of up to 150,000 persons. This latter figure represents almost a doubling in the Shire's current (2006) population of about 84,000 persons.

The new (2004) strategic plan states a requirement for all Contribution Plans to be reviewed and updated.

The traffic studies that have shaped this Plan are the:

- *Banora Point and Tweed Road Development Strategy Review 2004.*
- *Murwillumbah Distributor Road Network Study (2005), and*
- *Tweed Road Development Strategy (1997)*
- *Lower Tweed and Pacific Highway Traffic Masterplan*

Summary of Road Infrastructure Works Program

As a consequence of the past and projected development, and having regard to the level of road facilities currently available, it has and will be necessary to provide substantial additional road capacity.

This Plan identifies 137 individual road improvement projects that either have been, or need to be, constructed to accommodate anticipated traffic volumes. (These projects exclude most of the roads and streets that developers will need to construct in order to specifically serve their own developments). The cost of the projects, that Council has or will need to fund, is \$303M as summarised below.

Table ES.1 – Road Infrastructure Works Program Costs			
<u>Location</u>	<u>Capital Cost</u>	<u>Works Status</u>	
		<u>Completed</u>	<u>Proposed</u>
TOTAL	\$303.2M	\$37.4M	\$265.8M

EXECUTIVE SUMMARY (continued)

To date, some \$19M has been collected in developer contributions, compared with the \$37M already spent on works completed under the Plan. The fact that Council must carry the deficit, by completing works in advance of the anticipated development, has been anticipated and is part of the Plan's overall philosophy. By the same philosophy, Council can and will continue to levy contributions toward these and future completed works.

Summary of Contribution Rates

As in previous versions of this s.94 Plan, the proposed levies will comprise a Standard Contribution, plus a Local Area Contribution (if applicable). Local Area Contributions will be levied in 4 'local areas' of the Shire, so as to recover the full cost of selected road infrastructure projects required to specifically serve these areas. The Standard Contributions, which vary with locality across the Shire, will partially fund the balance of the road infrastructure works program.

This Plan proposes developer contributions based on land use, calculated in accordance with the traffic generating principles in Section 7. The contributions payable by a typical new household would be as follows:

Table ES.2 - TRCP Household Contributions

<i>Sector</i>	<i>Locality</i>	<i>Standard Contribution</i>	<i>Local Contribution</i>	<i>Total Contribution</i>
1	Tweed Heads	\$ 3,848	\$ -	\$ 3,848
2	Tweed South	\$ 5,492	\$ -	\$ 5,492
3	Cobaki	\$ 5,856*	\$ -	\$ 5,856
4	Bilambil Heights	\$ 10,686*	\$ -	\$ 10,686
5	Terranora	\$ 8,957	\$ -	\$ 8,957
	LAC1: 'Area E'	\$ 8,957	\$ 3,269	\$ 12,226
6	Kingscliff	\$ 5,050	\$ -	\$ 5,050
7	Duranbah/Cabarita	\$ 5,603	\$ -	\$ 5,603
	LAC2: Kings Forest Development	\$ 5,603	\$ 2,343	\$ 7,943
	LAC4: Kings Beach Development	\$ 5,596	\$ 936	\$ 6,532
8	Pottsville	\$ 6,422	\$ -	\$ 6,422
	LAC3: Koala Beach /Leisure Gardens	\$ 6,422	\$ 1,293	\$ 7,715
9	Murwillumbah	\$ 6,844	\$ -	\$ 6,844
10	Kielvale	\$ 9,386	\$ -	\$ 9,386
11	Burringbar	\$ 6,584	\$ -	\$ 6,584
12a	Rural - Inner North Zone	\$ 13,832	\$ -	\$ 13,832
12b	Rural - Inner West Zone	\$ 12,096	\$ -	\$ 12,096
13	Rural - Outer Zone	\$ 13,858	\$ -	\$ 13,858

* A number of older development consents with TRCP No4 contributions may be paid at Version 4.9 rates prior to adoption Version 5 thereby creating a cash flow shortfall for these sectors. Contribution Rates for these sectors shall be amended by applying an adjustment

EXECUTIVE SUMMARY (continued)

Factor based on the difference between payments received under version 4.9 and those payable under version 5 divided by the number of trip ends remaining in the sector. The Adjustment factor will be calculated at the date of Version 5 becoming effective.

A contribution may also be required in relation to activities that generate heavy haulage (extractive materials) traffic (see Section 7.2). Heavy haulage has a source and destination, to avoid double dipping, the charge will be made on destination development.

Based on the contribution rates specified in this Plan and the extent and distribution of the anticipated future development, the Plan will recover 79% of the total (\$305M) cost of the road infrastructure program, as shown in Table 3, below. The balance of the cost of the road infrastructure program (\$63M) will be carried by Council and represents an investment in the 'spare capacity' of the road network that would exist, once the currently anticipated levels of development are achieved.

Table ES.3 – Road Infrastructure Cost Recovery

<u>Works Type</u>	<u>Value</u>	<u>Revenue</u>	<u>Recovery</u>
LAC Works	\$ 19.6M	\$ 19.6M	100%
Other Works	\$ 283.6M	\$ 220.1M	78%
All Works	\$ 303.2M	\$ 239.7M	79%

The contribution rates in the Plan will be amended on the 1st of July each year based on the Construction Price Index for Brisbane as determined by the Australian Bureau of Statistics or a re run of the VLC model.

Council Policies

A) Concessions: a concession is offered to all commercial job creating **developments (not including detached housing and unit developments)**, across the Shire except in the following areas:

- i) coastal development between Kingscliff and Bogangar (Sector 7): Casuarina, Kings Forest, Salt, and the 'Tourist Property' (Lot 490 DP 47021); and
- ii) developments in Bilambil Heights and Cobaki.

The concession is not available for developments exploiting 'existing use rights' as defined in Clause 7.1, and nor can Local Area Contributions be discounted by the concession.

The offer by Council stands at forty percent (40%) until the Year 2008 and Council will review the concession on an annual basis at 1st July each year.

B) Deferred Payments: Council accepts staged payment of commercial contributions: four equal payments over three years consisting of an initial payment and three subsequent payments together with a bank guarantee as security, although other options that protect Council's interest may be acceptable.

C) Heavy Haulage (Extractive Material)

This contribution is applied to developments that receive extractive materials from heavy haulage vehicles using Council's road network. [If all or part of the material is obtained from a designated source, Council will waive the contribution requirement for that amount of material obtained from the designated source. A copy of the current list of designated sources may be obtained from Council.]

D) Eligible Business Enterprises

Eligible Business Enterprises may be excluded from the need to make TRCP payments. Eligible Business Enterprises are defined as retail, commercial and light industrial, change of use, activities to be established in rented premises with a gross floor area of less than 1,000m². Professional chambers are included in the definition. Final determination of the eligibility of a business into this category will be at the discretion of the Director Development Services.

1. INTRODUCTION

1.1 Need for Plan

This Contribution Plan, known as the Tweed Road Contributions Plan (CP No 4), is a financial strategy for the provision of roads in the Tweed Shire to satisfy travel growth demands.

The timely and affordable provision of infrastructure requires extensive land use forecasts and financial planning. Contributions' plans coordinate both these aspects to provide a valuable project management tool, which transparently describes the developer pricing policies being adopted and the outcomes/services being sought/funded.

The Plan is also a requirement of the New South Wales EP&A Act (1979) and Regulation (2000) to enable the Council to require a contribution towards the provision, extension or augmentation of public amenities and services required as a consequence of growth.

1.2 Scope of Plan

This Plan undertakes to do the following:

- to ensure that an adequate level of public road infrastructure is provided throughout the Tweed Local Government Area;
- to enable the Council to recoup funds which it has spent in the provision of public facilities in anticipation of likely future development;
- to ensure that the existing community is not burdened by the provision of public roads required as a result of future development;
- to provide a comprehensive strategy for the assessment, collection, expenditure, accounting and review of development contributions on an equitable basis throughout the Tweed Shire; and
- to update Contribution Plan No 4 (Version 4.9) as a result of a review of road infrastructure requirements and their associated costs, and also to amend the Plan in respect of the boundaries used to define the sectors by which the Standard Contributions are determined. (NB. The underlying principles and methods of allocating the cost of the road infrastructure program to future development have not changed from those used in versions 4.0 to 4.9 of the Plan).

2. BACKGROUND

The *Tweed Road Development Strategy (1997)* was completed within the context of predicting traffic growth based on current and planned land zonings within the Shire.

The key documents and supporting studies, which underpin this update of Contributions Plan No.4, are the:

- *Tweed 4/24 Strategic Plan 2004-2024 (2004)*
- *Tweed Local Environment Plan 2000*
- *Lower Tweed and Pacific Highway Traffic Masterplan*

2.1 the Tweed 4/24 Strategic Plan 2004-2024 (2004)

The *Tweed 4/24 Strategic Plan* updates the previous *Tweed 2000+ Strategic Plan*, which had been in effect since December 1996. This strategic plan is the over-arching document of all of the Shire's planning instruments. It sets out broad directions and objectives, and proposes a package of more detailed plans, policies and actions that will be progressively implemented and updated in response to changing needs over the next 2 decades.

Some key elements of the strategy, relevant to the Shire's road infrastructure needs and hence this Plan, are:

- a Rural Settlement Strategy to guide rural subdivision and expansion of villages
- a new Land Use Structure Plan, providing detailed proposals for urban and rural land use.
- a new and broader Tweed Infrastructure Program, which will cover all major items of physical, social and environmental infrastructure, including State and Federal Government projects, and which minimises the cost to government of servicing new development.

2.2 the Tweed Local Environment Plan 2000

The TLEP 2000 is a statutory plan, consisting of a set of 45 Zone Maps, which divide the Shire into various land-use zones, and a written document, which sets out what development can be carried out within them.

The TLEP is a 'living document'. It was first gazetted in April 2000 and has since been the subject of 47 amendments, reflecting the outcomes of the Shire's own planning studies or of planning approvals, with the last revision being in October 2006.

2. BACKGROUND (Continued)

2.3 Tweed Road Development Strategy (2007)

This latest *Tweed Road Development Strategy* is a completely new, bottom up, revision of the strategy prepared by Veitch Lister Consulting (VLC) in 1997, and which underlay the previous series (versions 4.0-4.9) of this Contribution Plan.

The *Tweed Road Development Strategy (2007)* is the culmination of two separate traffic studies, being:

- the *Banora Point and Tweed Road Development Strategy Review 2004*, during which VLC developed new traffic forecasting models of the Shire for design years of 2011 and on 'ultimate development' of the Shire in accordance with the then TLEP. These models were used initially by the Shire to test and refine the road network requirements in the urban area and subsequently by the NSW Roads and Traffic Authority (RTA) to prepare the *Lower Tweed and Pacific Highway Traffic Master Plan (2006)*.
- the *Murwillumbah Distributor Road Network Study (2005)*, adapted the same VLC models to examine alternative road network options in and about Murwillumbah.

Preparation of the 2007 Road Network Development Strategy itself involved incorporating the 'preferred networks' from the Shire's two studies and from the RTA's study into the 'ultimate development' traffic model and then confirming that all aspects of the composite road network would provide adequate levels of service in the long-term. This finalised and preferred, long-term road network was then used to establish the contribution rates now included in this Plan.

The road infrastructure program, which has resulted from the 2007 Road Network Development Strategy, will form a key component of the broader Tweed Infrastructure Program.

3. LEVY AREAS

This Contribution Plan levies all traffic generating developments within the Tweed Shire local government area. A two-tier system is used to determine the overall TRCP contribution: Standard Contribution and a Local Area Contribution.

A contribution will be required from activities that generate heavy haulage traffic anywhere in the Shire.

3.1 Standard Contribution

In assessing the standard contribution, the Plan uses a differential pricing system based on 14 sectors (or localities) and the intended land use:

- Sectors - the unit rate of contribution varies across the Shire depending on the value and amount of road space likely to be consumed by a unit of traffic (a trip-end) generated by a development located in that area. The 14 sectors defined for this purpose are shown in Figure 3.1 (in Schedule 3).
- Land Use – differing land uses and development types generate differing traffic volumes or demands. The potential traffic generation of an intended development can be determined using the trip rate table in Table 7.1 (following on Page 16).

The Standard Contribution payable is determined from the product of the sector-based unit rate and the estimated traffic generation of the development.

3.2 Local Area Contributions

Council administers, on behalf of land-owners/developers, the assignment or apportionment of responsibility for works in localised areas. These areas are listed in Table 3.1 and defined in Figures 3.2a – 3.2d. Council may add to this list where the need arises or when approached by a consortium of land owners.

Table 3.1 - Local Area Contributions

<i>No.</i>	<i>Locality</i>	<i>Developments</i>	<i>Application</i>
1	Terranora	Terranora, Area E	Land defined in Figure 3.2a ⁽¹⁾
2	Cabarita	Kings Forest	Land defined in Figure 3.2b ⁽¹⁾
3	Pottsville	Leisure Gardens, Koala Beach	Land defined in Figure 3.2c ⁽¹⁾
4	Duranbah /Cabarita	Kings Beach	Land defined in Figure 3.2d ⁽¹⁾

Notes: 1. Refer to Schedule 3

4. NEXUS

4.1 Need

Population growth is known through experience to generate additional traffic, creating the need for improved roads or sometimes more roads. The actual volume and characteristics of traffic demand is directly related to land-use. Field surveys and manuals on the subject, including the NSW Roads and Traffic Authority's Guide to Traffic Generating Developments (Issue 2.2 – October 2002) demonstrate that the increase in traffic is dependent on the types of development. The actual increases vary considerably with the extreme being the increase in traffic generation due to shopping centres, fast food stores and the like.

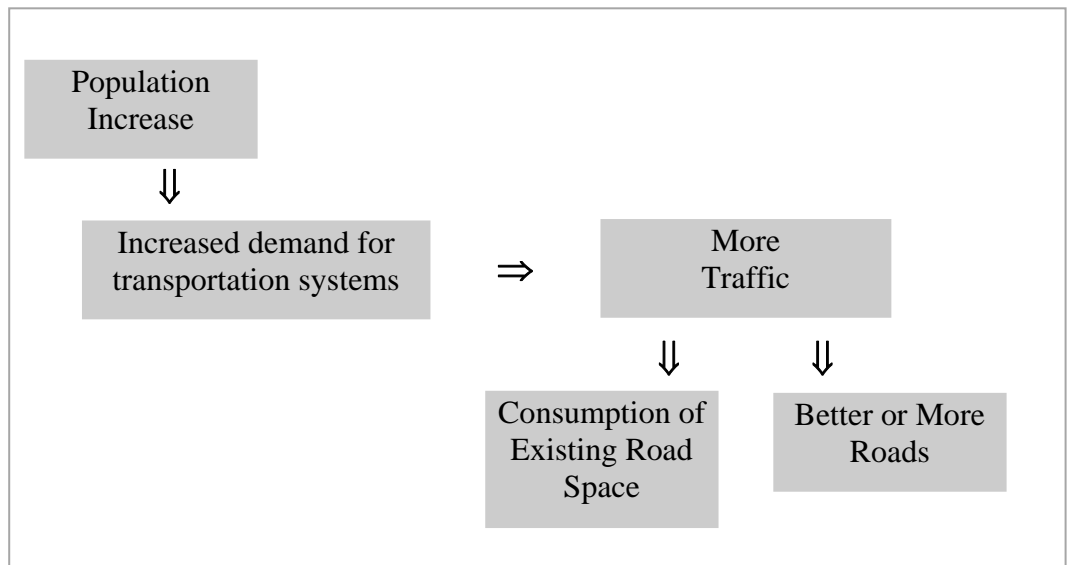

Figure 4.1 Nexus

4.2 Impacts

Extra traffic can impact upon:

- * operational efficiency
- * amenity
- * safety
- * pavement life; and
- * public finances

Operational efficiency traditionally relates to the performance of major roads. However, in high growth areas like the Tweed Shire, the effects may extend to local roads, which were never designed nor envisaged to be significant traffic corridors. Amenity is primarily a concern for residents fronting local roads and in particular local urban streets. Safety, arguably the most important consideration of all, applies everywhere. Remedies are provided through augmentation, replication, and diversion.

Development traffic may significantly reduce the expected life of a road pavement. Such impacts are well advanced in literature. For example, it has been known since the 1950's (Yoder, 1959) that the life of a pavement is

4. NEXUS (Continued)

proportional to the load being applied and varies directly with the logarithm of the number of load applications. That is, the heavier the load and the more frequent a load is applied, the quicker a road fails. It is this principle that forms the basis of the Heavy Haulage Contribution in Sections 6.4 and 7.2.

Traffic impacts accumulate over time. A contributions policy overcomes financing issues created by incremental development / decision making processes. It can nearly always be shown that an impact of a small single development is negligible and therefore seemingly admissible. However, in time the cumulative impact of several developments may cause significant funding dilemmas for a service provider, especially where threshold capacities are exceeded.

4.3 Assessment

Council engaged, Veitch Lister Consulting to examine the impact of development on Council's road network and to equitably assign the cost of developing the future road network between the users. This was undertaken as part of the Tweed Road Development Strategy (2007).

4.3.1 Model

Veitch Lister Consulting used advanced computer simulation techniques to predict the likely impact of traffic on the Tweed road network. The outcome of this mathematical model is the best prediction Council can obtain of the volume and distribution of traffic growth in the years to come.

4.3.2 Growth

As a prerequisite to developing the new traffic model of Tweed Shire for the Banora Point / South Tweed Traffic Study (2004), VLC undertook a comprehensive review of the Shire's potential future population and its distribution. This re-appraisal was documented in Working Paper No.2 (Demographic Assumptions) of that study and summarised in Table 4.1, below.

Table 4.1 - Forecast Population Growth

Area	2001	2011	Ultimate (2030?)
Tweed Heads	7,642	8,241 (+8%)	9,028 (+18%)
West Tweed Heads	9,138	13,027 (+43%)	27,461 (+201%)
South Tweed Heads	22,161	27,791 (+25%)	36,141 (+63%)
North Tweed Coast	8,807	16,075 (+83%)	29,574 (+236%)
South Tweed Coast	7,298	12,521 (+72%)	15,274 (+109%)
Murwillumbah	7,553	8,714 (+15%)	11,900 (+58%)
Rural ⁽¹⁾	11,781	12,828 (+9%)	17,888 (+52%)
TOTAL	74,380	99,197 (+33%)	147,266 (+98%)

Notes: 1. Including rural villages

4. NEXUS (Continued)

4.3.3 Traffic

VLC's traffic modelling found that the Tweed Shire road network will experience considerable traffic growth, especially on the Tweed Coast and in the urban areas, as a result of the anticipated urban development. Most major urban road corridors will be required to carry considerably more traffic, with many needing to be upgraded or augmented through the addition of new road corridors or links.

Schedule 6 to this Plan, together with the *Tweed Road Development Strategy (2007)* describe in detail the scale of works needed to provide adequate levels of traffic service in these growth areas. No new rural road links are required, however many rural roads require widening and re-alignment to improve capacity and road safety generally. No rural road has been identified to be greater than two lanes.

4.4 Administration

Management is essential if the desired outcomes of this Plan are to be achieved in a timely and affordable manner, and to meet the requirements of the s94 Regulations. Constant supervision and management will be required over a number of years. The recovery of these costs is required by policy of Tweed Shire Council and is set at 5% of the contribution payable. This rate will be reviewed at the 1st of July each year.

5. WORKS SCHEDULE

5.1 Works

The road infrastructure projects covered by this Plan (both completed and proposed) are listed, along with detailed costings, in Schedule 4. The road infrastructure works program comprises 137 items, estimated to cost around \$303M.

This road infrastructure works program is the result of functional analyses of the future road network during the various traffic studies that preceded this Plan and is listed in the Executive Summary.

5.2 Existing Roads

Contributions specified in this Plan are calculated on the unit capacity consumed in the road network, including existing roads assessed at replacement value including a land value component, in accordance with Council's policy. Although the contributions are based on road space consumption, the monies raised will all be directed toward completing the projects in the road infrastructure works program.

6.1 Background (Transport Modelling)

The prediction of traffic volumes on individual roads in Tweed Shire has been undertaken using VLC's proprietary travel demand forecasting software ('Zenith'). In essence, the Zenith models forecast the number of 'trips' likely to be made between differing areas (or zones) - a 'trip matrix'. A trip has two end points - a beginning point or 'origin' and a 'destination', which is sometimes referred to as the 'attraction'.

For example, if someone leaves home to go shopping, the 'origin' end of their trip is their house and the 'destination' end of their trip is the chosen shopping centre. On the journey home though, the shopping centre becomes the start point or origin and the person's house is the destination. Some journeys may involve a number of 'stops' and this too is accounted for via a concept called 'diverted' trips.

Given the future land use assumptions and the transport network connecting these land uses, the Zenith model uses parameters derived from existing travel patterns and choices to forecast where people will most likely travel from and to. It does this for a multiplicity of trip purposes, such as shopping trips, commuting, going to school, etc. The Zenith model also forecasts which trips are likely to be undertaken by walking or cycling and by public transport, in order to determine the 'vehicle trip matrices'.

6.2 Standard Formula

Contributions in this Plan have been calculated using 'trip-ends', which is a basic measure of traffic generation. Every trip has two ends.

In making a journey or trip, a vehicle will occupy space (or consume capacity) on each road link travelled. By assigning unit values (\$) of capacity to each link in the model road network, the VLC model is able to determine the value of road space consumed by vehicular trips between pairs of areas (or sectors).

Given that each trip has two ends, the value of the road space consumed by each trip can be allocated half to each sector.

The value of road space consumed by each sector is half of the sum of the road space consumed by all trips to or from that sector. The average value of road space consumed by the sector any trip to or from the sector is, then, that sector's total share of road space consumption divided by the total number of trip-ends generated or attracted by that sector. The formula below conceptually outlines the computation process.

$$\$Standard\ Trip\ End_{cost} = \frac{\$Total\ Road\ Capacity\ Consumed_{sector}}{Total\ Trip\ Ends_{sector}}$$

6. FORMULA (Continued)

where:

$\$Standard\ Trip\ End_{cost}$ = Standard Contribution per daily trip-end

and

$Total\ Trip\ Ends_{sector}$ = the sum of all trip-ends either originating from or attracted to land use activities within the sector.

and

$\$Total\ Road\ Capacity\ Consumed_{sector}$ = the sum of road capacity consumed on all roads by traffic either originating or attracted to activities in the sector.

The above calculations are repeated for each individual area (or sector). In the case of this Plan, fourteen sectors have been assessed (as defined in Figure 3.1 in Schedule 3) and the calculation summarised in Table 6.1 below.

<i>Sector</i>	<i>Value of Capacity Consumed by Each Sector</i>	<i>Trip Ends Generated by Each Sector</i>	<i>\$Standard Trip End_{cost}</i>
1. Tweed Heads	\$52,987,985	94,010	\$ 564
2. Tweed Heads South	\$119,986,990	149,032	\$ 805
3. Cobaki	\$31,224,411	36,352	\$ 859
4. Bilambil Heights	\$66,910,271	42,727	\$1,566
5. Terranora	\$36,248,831	27,612	\$1,313
6. Kingscliff	\$46,865,751	63,352	\$ 740
7. Duranbah	\$62,695,377	76,362	\$ 821
8. Pottsville	\$26,222,698	27,880	\$ 941
9. Murwillumbah	\$55,568,538	55,379	\$1,003
10. Rural – Inner East	\$38,625,238	28,067	\$1,376
11. Burringbar	\$6,584,089	6,825	\$ 965
12a. Rural – Inner North	\$8,075,010	3,984	\$2,027
12b. Rural – Inner West	\$18,565,213	10,470	\$1,773
13. Rural - Outer	\$21,102,214	10,373	\$2,034
Overall	\$591,662,616	632,425	\$ 936

6.3 Local Area Formula

This Plan also administers the equitable distribution of construction costs of local works between local developers. Urban release areas may involve a number of landowners, and the aim is to assist the parties to jointly fund shared and necessary infrastructure facilities.

The cost of the designated local works in each local area have been similarly apportioned on the basis of the trip-ends expected to be generated / attracted by all anticipated developments in that local area, as follows:

6. FORMULA (Continued)

$$\text{\$Local Trip End}_{\text{cost}} = \frac{\text{\$Works}_{\text{local}}}{\text{New Trip Ends}_{\text{local}}}$$

where:

$\text{\$Local Trip End}_{\text{cost}}$ - Local Area Contribution per daily trip end

and

$\text{\$Works}_{\text{local}}$ - value of the local works projects.

and

$\text{New Trip Ends}_{\text{local}}$ - the total 'new' trip-ends expected to be generated / attracted by all anticipated (new) developments in the area.

Table 6.2 is the result of applying the local area formula at four localities. The number of localities may increase where local developers wish Council to administer the distribution or liability for local works.

Table 6.2 - Local Area Trip End Unit Costs

Location	Value of Works _{local}	New Trip Ends	\$Local Trip End _{cost}	Comments
1. Terranora	\$ 6,150,199	13,669	\$479	<ul style="list-style-type: none"> • Applies to all of 'Area E' • Work Items 126 - 132
2. Cabarita	\$ 10,301,920	30,000	\$343*	<ul style="list-style-type: none"> • Applies to the Kings Forest Development only • Work Items 133 - 134
3. Pottsville	\$ 1,863,270	10,435	\$190**	<ul style="list-style-type: none"> • Applies to Leisure Garden and Koala Beach Estates only • Work Items 135 - 136
4. Kings Beach	\$ 1,318,900	9,680	\$137	<ul style="list-style-type: none"> • Applies to Kings Beach Development only • Works Item 137
Total	\$19,634,289	--	--	

* For estimation purposes only - the Kings Forest Development will be required to construct the road
 ** For estimation purposes only - Work Items 135 - 136 are to be equally shared between the parties, Leisure Gardens and Koala Beach Estates, with costs and timing of the contribution subject to negotiation and surety.

Work Items 126 – 136, inclusive, are to be totally funded by the 'new' development, as the works are not required by the broader community. The determination of the Local Area Contribution is purely administrative, to allow Council to share local costs between local developers. That is, Council would not manage localised situations, if it meant funding or acting as banker to the release area.

6.4 Interest

It is not planned to borrow to fund the construction of projects listed in the Works Schedule of the Plan. The timeframe for construction will be based on cash flow paid into the Plan and projects generally wont be constructed until sufficient funds are available within the plan

6. FORMULA (Continued)

6.5 Heavy Haulage (Extractive Material)

Developments in this category will be charged a contribution commensurate with the additional wear and tear on Council's road network caused by heavy transport vehicles and/or frequent traffic use. This contribution is in addition to the contributions in Section 6.1, which are based on consumption of road network space / capacity.

For the purpose of this plan "heavy haulage" applies to the haulage by road of extractive material. It includes quarry products and raw materials, soil, clay, silt, sand, gravel, rock, stone, aggregate, fill and similar substances.

Heavy haulage has a source and destination. To avoid double dipping, the charge will be made on destination development.

The contribution is a levy based on quantities, calculated as follows:

$$\$Unit = \frac{\$Value\ of\ pavement\ consumed_{reconstruction\ cost}}{life\ of\ pavement_{ESA's}}$$

where:

$\$Unit$ = heavy haulage contribution per tonne per kilometre

and

$\$Value\ of\ pavement\ consumed_{reconstruction\ cost}$ = cost per kilometre to rehabilitate pavement for the expected usage life of the pavement

$life\ of\ pavement_{ESA's}$ = life of pavement measured as a function of usage, ie. Equivalent Standard Axles (ESA's).

Based on the assumptions and computations included in Schedule 1, the $\$Unit$ charge to be levied under this current Plan will be:

\$ 0.21 per ESA per kilometre of road traversed with load onboard.

6.6 Administration

A surcharge of 5% to cover the costs associated with administering and updating the Plan is applied to heavy haulage contributions collected under this Plan.

7. CONTRIBUTION RATES

Traffic generating developments are required to contribute to the development of Tweed Council's road network, calculated in accordance with Sections 7.1 and 7.2 below. Development applications will be conditioned at consent to contribute the TRCP contribution, \$Con TRCP, or the "Heavy Haulage Levy" \$Con TRCP - HEAVY , or both.

7.1 Standard and Local Area Contributions

TRCP contributions, \$Con_{TRCP}, are calculated:

$$\text{\$Con}_{\text{TRCP}} = (\text{Admin} \times \text{Trip End}_{(\text{development})} \times \text{\$Total Trip End}_{\text{cost}}) - \text{\$Existing}$$

where:

\\$Con_{TRCP} - contributions paid to Council by way of condition of consent

and

Trip Ends_{development} - the total trip ends created or attracted to the development being assessed, using trip generation rates in Table 7.1.

and

\\$Total Trip End_{cost} - total trip-end cost, as defined later in this Section.

and

\\$Existing - value of 'existing use rights', where applicable.

and

Admin - Administration Charge of 5%

The total trip-ends of a development shall be calculated using the trip generation rates listed in Table 7.1, following. These trip generation rates are NOT to be used for the design of traffic facilities, as Council adopts specific design codes referred to in DCP 16 for these works.

Redevelopment will not be automatically entitled to the 'existing right'. Applicants may need to show how the 'existing right' reflects contributions to the funding of major works in this Plan.

The total trip cost is given by:

$$\text{\$TotalTripEnd}_{\text{cost}} = \text{Modification} \times (\text{\$StandardTripEnd}_{\text{cost}} + \text{\$LocalTripEnd}_{\text{cost}})$$

where:

Modification - allowance for diverted trips - see Table 7.2

\\$Standard Trip End_{cost} - Standard Contribution - see Section 6.1

\\$Local Trip End_{cost} - Local Area Contribution - see Section 6.2

7. CONTRIBUTION RATES (Continued)

Table 7.1 - Trip Generation Rates by Land Use

No	Land Use	Daily Trip Rate	Unit Per
1	Detached Housing	6.5	Household
2	Unit Development	3.9	Unit
2.1	Housing for older people or people with disabilities (SEPP 5)		
a.	Residential care facility	2	Occupant
b.	Hostel	2	Occupant
c.	Self contained dwelling with onsite community facilities (community meeting rooms, recreation/sports facilities, library/reading rooms etc)	2.5	Dwelling
d.	Self contained dwelling. No onsite community facilities (apart from communal laundry, washing)	3	Dwelling
3	Child Minding Facility	3.7	Enrolment
4	Primary School	1.4	Enrolment
5	High School	1.4	Enrolment
6	Service station	200	Pump
7	TAFE College	1.8	Enrolment
8	Shopping Centres , 100m2	2.8 (A)	A = m2 GLA
9	101m2 < SC < 6,000m2	200 + 0.8 (A)	A = m2 GLA
10	6,001m2 < SC < 10,000m2	500 + 0.75 (A)	A = m2 GLA
11	Shopping Centre > 10,001m2	3200 + 0.48 (A)	A = m2 GLA
12	Garden centre not included in Shopping Centre	40	100 m2 retail area
13	Hardware not included in shopping centre	80	100 m2 GLA
14	Mixed Retail Showroom	40	100 m2 GLA
15	Furniture Showroom	10	100 m2 GLA
16	Office (Professional Centre)	16	100 m2 GLA
17	Major Offices (including government)	12	100 m2 GLA
18	Medical Centres & Dentists	50	100 m2 GLA
19	GP Surgery	50 - 150	100 m2 GLA
20	Retail Tyre Outlets	10	100 m2 GLA
21	Motels	5	100 m2 GLA
22	Taverns, Hotels	110	100 m2 GLA
23	Restaurant	60	100 m2 GLA
23.1	Fast food outlet with associated drive through capability	200	100m2GLA
24	Retail Market	20	100 m2 GLA
25	Recreation - Squash	40	Court
26	- Tennis	40	Court
27	- Gymnasium	50	100 m2 GLA
28	Factories covered by light industry	5	100 m2 GLA
29	Warehouses	4	100 m2 GLA
30	Hospitality Facilities	50	100 m2 GLA
31	Licensed Clubs	100	100 m2 GLA
32	Motor Showrooms	5	100 m2 GLA
33	General Heavy Industry	1.5	100 m2 GLA
34	Mixed Industrial Park	7.0	100 m2 GLA
35	Tourist Resort	2.48 plus 12	Room or Unit 100m ² GLA of restaurant

Notes:

- a) A denotes area of floor space in m2 Gross Lease Area (GLA).
- b) Detached housing in Sector 13 - adopt 4.5 daily trips per household.

7. CONTRIBUTION RATES (Continued)

- c) Multiple Occupancies (MO's) in Sectors 12 and 13 - adopt half (0.5) the detached household generation rates per MO household.
- d) GLA for Motor Showrooms includes any external display areas.
- e) A TOURIST RESORT is defined as a tourist accommodation facility with integrated reception area, common servicing and management of up to 400 rooms or units; featuring mainly accommodation with restaurants, pools, tennis courts, gym, conference facilities and moderate rates of arrival by car of 40 to 70%; and being in an Urban or Fringe Urban location within the Tweed Region.
- If the Tourist Resort has a golf course/bowling greens/retail shopping/marina or is within a National park and is open to day visitors then category use No 35 does not apply and a Traffic Management Report will be required.

Allowance is made for diverted trip making, being shared purpose journeys, using factors given in Table 7.2.

Table 7.2 - Modification Factors for Specific Land Uses

<i>Category of Land Use</i>	<i>Contribution Modification</i>
Child Minding Facilities	0.60
Primary School	0.75
High School	0.80
Suburban Service Station	0.10
Local Shops to 100 m ²	0.15
101 m ² < Shop < 6,000 m ²	0.15 to 0.55 at 6,000 m ²
6,001 m ² < Shop < 10,000 m ²	0.55 to 0.60 at 10,000 m ²
Shops > 10,001 m ²	0.6
Fast food outlet with drive through facility	0.65

The modification factor applies to both the Standard and Local Area Contributions save that suburban service stations shall be a minimum of 0.5 when calculating the Local Area Contribution.

LTTS payments previously paid for a property are recognised by the TRCP at current dollar value, that is, indexed from the day of payment using the All Groups Consumer Price Index (ABS 6401.0) for Brisbane. Alternatively, where LTTS contributions have been made, recognition may be given at the rates in this Plan for equivalent land use categories. For example, a previous payment for 10 households in the old LTTS Scheme is equivalent 10 households in this scheme.

In summary, TRCP contributions per household for each sector, including local area contributions are outlined in Table 7.3. This table also gives the \$Total Trip End cost for each Sector, assuming no discounts for diverted trip making and no previous LTTS payments.

Table 7.3 - TRCP \$Total Trip End_{cost} and Household Contributions by Sector

Sector	Locality	\$Standard Trip End Contribution	\$Local Trip Contribution	Admin Fee 5%	\$Total Trip End Contribution	Trip ends /Household	Household Contribution
1	Tweed Heads	\$564	\$ -	\$1.05	\$592	6.5	\$3,848
2	Tweed Heads South	\$805	\$ -	\$1.05	\$845	6.5	\$5,492
3	Cobaki	\$859	\$ -	\$1.05	\$901	6.5	\$5,856
4	Bilambil Heights	\$1,566	\$ -	\$1.05	\$1,644	6.5	\$10,686
5	Terranora	\$1,313	\$ -	\$1.05	\$1,378	6.5	\$8,957
	LAC1: 'Area E'	\$1,313	\$406	\$1.05	\$1,881	6.5	\$12,226
6	Kingscliff	\$740	\$ -	\$1.05	\$777	6.5	\$5,050
7	Duranbah/Cabarita	\$821	\$ -	\$1.05	\$862	6.5	\$5,603
	LAC2: Kings Forest Development	\$821	\$202	\$1.05	\$1,222	6.5	\$7,943
	LAC4: Casuarina	\$821	\$81	\$1.05	\$1,005	6.5	\$6,532
8	Pottsville	\$941	\$ -	\$1.05	\$988	6.5	\$6,422
	LAC3: Koala Beach/Seabreeze	\$941	\$85	\$1.05	\$1,187	6.5	\$7,715
9	Murwillumbah	\$1,003	\$ -	\$1.05	\$1,053	6.5	\$6,844
10	Rural - Inner East	\$1,376	\$ -	\$1.05	\$1,444	6.5	\$9,386
11	Burringbar	\$965	\$ -	\$1.05	\$1,013	6.5	\$6,584
12a	Rural - Inner North	\$2,027	\$ -	\$1.05	\$2,128	6.5	\$13,832
12b	Rural - Inner West	\$1,773	\$ -	\$1.05	\$1,861	6.5	\$12,096
13	Rural - Other	\$2,034	\$ -	\$1.05	\$2,132	6.5	\$13,858

7. CONTRIBUTION RATES (Continued)

7.2 Heavy Haulage Contributions

The heavy haulage contribution applies to destination developments which attract heavy haulage (extractive material) traffic, for example (and without limiting the application of this section) - subdivisions, landfill, roadworks, parking areas, extractive material processing and the construction phase of development projects. In order to prevent double dipping it does not apply to source activities such as extractive industries and quarries.

$$\$Con_{TRCP-HEAVY} = Prod. \times Dist \times \$Unit$$

where:

$\$Con_{TRCP-HEAVY}$ - heavy haulage contribution

and

Prod. - projected demand for extractive material to be hauled to/from the site over life of project, in tonnes

Dist. - the length of the haul route on Shire roads (one way, in kms)

\$Unit - the unit cost of rehabilitating a road, as in Schedule 1

For example:

$$\begin{aligned} \$Con_{TRCP-HEAVY} &= 5,000 \text{ tonnes} \\ &\quad \times 20 \text{ kilometres} \times 5.4c \text{ per tonne per kilometre} \\ &= \$ 5,400 \end{aligned}$$

7.3 Self Containment and Disputes

This Plan assumes particular land uses and traditional containment factors consistent with a wide range of urban forms, but not all situations can be pre-empted. From time to time, Council may receive development applications that do not fit with these assumptions. Council will assess these instances on the merit of the individual case.

Council's strong preference is towards a negotiated outcome; however, in the event that an agreement can not be reached Council will commission a competent consultant, funded by the applicant to resolve the matter.

8. CASH FLOWS

8.1 Income

Development contributions are expected to yield \$239.7 Million (Table ES 3) excluding concessions. The estimated cost of the projects in the Works Schedule is \$303 Million resulting in a shortfall of \$63.5 million which is to be funded from grants and other funding sources .

8.2 Expenditure

Council will adopt a rolling 5 year Road Infrastructure Works Program based on the projects listed in the works schedule (Schedule 5) and taking into account traffic demand and the funds balance within the Plan. The 5 Year Works Program will be reviewed annually to ensure its currency

An underlying consideration in determining the Road Infrastructure Works Program is that contributions from some developments will be “in kind” for several years before ‘credit’ works are exhausted. Council must be in agreement with ‘in kind’ contributions prior to approval since ‘works contributions’ may jeopardise the financing of other Plan projects.

9. PAYMENTS

9.1 Timing of Payments

Contributions are payable at the time prescribed in Table 9.1.

Table 9.1 - Timing of Payments

<i>Type of consent</i>	<i>Timing</i>
Subdivision where no further approvals are required	prior to release of the subdivision certificate
Development not involving subdivision but where a subsequent development application is required	prior to release of the construction certificate
Heavy haulage developments	annual fees submitted in quarterly increments
Any other developments	prior to the endorsement of the final plan or commencement

9.2 Indexation

Contributions are fixed for a twelve month period from the date of development consent and thereafter levied at the contribution rate current at the time of payment.

Sector contributions in this Plan will be indexed on the 1st July of each year

- (i) based on the Implicit Price Deflator for Private Gross Fixed Capital Expenditure for Non-dwellings Construction as published by the Australian Bureau of Statistics (5204.0) or
- (ii) revised works estimates prepared and the VLC transport/contribution models re-run with the “re-valued” works included.

9.3 “In-kind” Contributions and “Credits”

9.3.1 “In-kind” contributions unrelated to roads

The Council may accept an offer by the applicant to make a contribution by way of an “in-kind” contribution or a material public benefit as referred to in the Regulations. The offer may only be accepted if the applicant satisfies Council that:

- (i) payment of the contribution in accordance with the provisions of the Plan is unreasonable or unnecessary in the circumstances of the case; and
- (ii) the ‘in-kind’ contribution will not prejudice the timing or manner of the provision of the road facilities for which the contribution is required; and
- (iii) the value of the works to be undertaken are at least equal to the value of the contribution assessed in accordance with this Plan.

9. PAYMENTS (continued)

9.3.2 Credits

Some developments will require the construction of works identified in the Works Schedule. Clause 7.3.6 of Council's *Tweed Development Program - Management Plan* outlines Council's policy in these instances and it is reproduced here in Schedule 2 for completeness.

Works will be valued in accordance with the Works Schedule of this Plan provided the applicant is paying the levies nominated in this Plan

9.4 Deferred Payment

The Council will generally not accept deferred or periodic payment of contributions. However, Council may consider an application where:

- (i) compliance with the provisions relating to when contributions are payable is unreasonable or unnecessary in the circumstances of the case; and
- (ii) non-compliance with the terms of this clause will not prejudice the timing or the manner of the provision of road facilities for which the contribution was required as outlined in the Works Schedule.

The decision to accept a deferred or periodic payment is at the sole discretion of the Council.

10. PAYMENTS

In the event Council decides to accept the deferred or periodic payment of contributions, the applicant may be required to provide an unconditional bank guarantee by an Australian bank or recognised financial institution. The bank guarantee will prohibit the bank from seeking recourse to the applicant or having regard to any appeal, dispute, controversy, issue or other matter relating to the carrying out of the development in accordance with the consent.

10.1 Tweed Road Contribution Plan (CP No 4 - Version 4.9)

From the date of adoption of this subsequent plan by Tweed Shire Council, this Plan supersedes the *Tweed Road Contribution Plan (CP No 4 - Version 4.9)*. All development consents more than twelve months old require the applicant to pay the rates applicable in “Council’s adopted Fees and Charges current at the time of the payment” or “the relevant Section 94 contribution current at the time of the payment”.

10.2 Contribution Plan No 14 - Mebbin Springs

Version 4.0 of this Plan superseded the *Rural Road Upgrading, Mebbin Springs Subdivision, Kyogle Road, Kunghur Contributions Plan (No 14)*. CP No 14 was repealed with the adoption of this subsequent Plan in only so far as all future development applications are concerned, That is, Consent S94/70, the only consent issued to date, will continue to be administered under CP No 14 for as long as the consent remains valid.

8. *Principle of Pavement Design*
By E. J. Yoder, published by John Wiley & Sons (5th printing, 1967)

SCHEDULE 1 – HEAVY HAULAGE (OF EXTRACTIVE MATERIAL)

Many of Council's urban and rural sealed roads have between 150 mm to 200 mm of gravel cover over virgin insitu material. While this is adequate for current needs, that is a projected life of 15 to 20 years, increased traffic usage or the increased percentage of heavy haulage traffic using a road significantly reduces the life of the existing pavement.

Council roads will normally require a further 200 mm of "top class" gravel to provide the additional strength for sustained heavy haulage developments. In most instances road base gravel may be added in the form of an "overlay". The existing bitumen is ripped, the additional gravel added, compacted and then sealed using 20/10 mm aggregates. Isolated weak points may be excavated or bridged with the use of "geo-textiles", but these additional costs are not generally incurred.

The Council's works cost-estimation database currently (at March 2007) uses a unit rate of \$41 per square metre for such rehabilitation to a Type D pavement. Assuming a pavement width of 10 metres (averaged over the whole shire), a typical 2-lane road would cost \$205,000 per lane-kilometre to rehabilitate.

In terms of traffic load, the life of a pavement is normally between 4×10^5 to 1×10^6 Equivalent Standard Axles (ESA's). For the purposes of this computation an average life of 7×10^5 ESA's will be assumed. The unit cost of the damage caused by heavy haulage vehicles can then be calculated as:

$\$Damage$	=	$\frac{\$205,000 \text{ per lane-kilometre}}{7 \times 10^5 \text{ ESA's}}$
	=	\$0.29 per ESA per kilometre of road traversed

Based on a standard T44 articulated vehicle (semi-trailer) with a laden weight of 30 tonne and a tare weight of 6 tonne (ie. a 24 tonne load), the pavement damage incurred by it making a return trip would be:

$\$Unit$	=	$(3.75 \text{ ESA's} + 0.75 \text{ ESA's}) \times \0.29 per ESA
	=	\$1.30 per kilometre of the haulage route
	=	5.4c per tonne per kilometre of the haul route

SCHEDULE 2 – CREDIT POLICY

Extract from Council's Tweed Development Program (at Page 30f):

“7.3.6 Credits

<p><i>STRATEGY No 9</i></p> <p><i>i) Credits are not cash redeemable</i></p> <p><i>ii) Credits are not transferable to other CP's unless purchased by the CP so neither fund is disadvantaged</i></p> <p><i>iii) Credits are not a commodity that may be bought and sold on the open market, they reside with the land (the person or company who is the proprietor of the development may assign credits to particular land parcels within their properties)</i></p> <p><i>iv) Credits may only be claimed at a new site if CP works required at the new site are not compromised by Council accepting works-in-kind rather than cash</i></p> <p><i>v) Credits are indexed in proportion to any indexations of levies or contributions</i></p> <p><i>vi) Not all external works are eligible for s94 assistance even though others gain benefit</i></p>
--

Some developments require the construction of works identified in s94 Contribution Plans. In these instances Council will condition the development to build these works (s91 EPA). In addition, the consent may:

- delete any requirement to make a monetary contribution to the Contribution Plan concerned (except the administration levy). That is, Council is satisfied the development has made a sufficient contribution, works-in-kind, to the s94 works program;
- in addition to requiring the construction of the said works include a provision to pay a monetary contribution in order to fund works away from the site, needed by the development; or
- include a requirement to build works, pay contributions and a relief mechanism where the built works may be used to offset monetary contributions.

Developments may provide 'works-in-kind' in excess of their fair share of contribution liability. A development is said to be in 'credit' at this point. Council will not cash redeem any credits as outlined below because this has the potential to undermine the orderly extension of Council's infrastructure. It will be a commercial decision upon the part of the developer whether they can fund their proposals.

External works, those works beyond a development property, are often required to enable a development to proceed. For example, connection to Council's infrastructure networks and local drainage catchments. The need and scale for these works are assessed as part of development application/ determination process using merit considerations outlined in s90 of EPA. Conditions of consent are then applied to a development requiring the works to be completed with the development.

The cost of these external works may be substantial and often not included in contribution plans. In recent years, the development industry has pursued and obtained more flexible zonings which allow greater variety of land uses. However, this actually restricts the opportunities for cost sharing arrangements at the local level since the nature of development is imprecise, works undefinable, and beneficiaries unknown. Consequently, the standard nexus and financial arrangements can not be satisfactorily formulated in some contribution plans.”

SCHEDULE 3 – BOUNDARY DEFINITIONS

Figure 3.1, below, defines the boundaries of the 14 sectors to be used in determining the applicable rate of Standard Contribution.

SCHEDULE 4 – VERSIONS OF THIS PLAN

VERSIONS/EDITIONS

Version 3.2 Lower Tweed Contribution Plan (LTTS) operational from 9-12-98

Version 4.0: Tweed Road Contribution Plan, operational 20-6-97 all consents issued on or after that date; or 30-7-97 for all current consents (more than twelve months old) with conditions requiring Lower Tweed Transportation conditions.

Version 4.1: Operational 1-1-99, repeals and replaces Version 4.0. Changes operation of heavy haulage contribution.

Version 4.2: Operational 8-8-2000, repeals and replaces Version 4.1. This Version of the plan amends Table 5.1(d) "Works Schedule" and Schedule 6 "TRDS Project Costings" by adding an additional item 137 for the new Local Area No. 4.

137 Cudgen Ck to Bogangar - 3 i/s- Kings Beach, Total Cost \$1,210,000

Version 4.3: Operational 3-10-2000, This Version of the plan amends Table 5.1(b) "Works Schedule" and Schedule 6 "TRDS Project Costings" by adding an additional item 138:-

138 Minjungbal Dr / Shallow Bay Dr Intersection, Total Cost \$300,000

Version 4.4 provides trip generation rates for housing of older people or people with a disability (SEPP 5) and for fast food outlets.

Version 4.5 inserts the category of tourist resort in the trip generation table 7.1

Version 4.6. of this plan amends Table 5.1(b) "Works Schedule" and Schedule 6 "TRDS Project Costings" by adding additional items 139 and 140:-

139 Minjungbal Dr/Machinery Dr Intersection, Total Cost \$323,000

140 Leisure Drive Upgrades

- (a) Upgrade Darlington Drive from Tweed Heads Bypass to Leisure Drive
Total Cost: \$495,000
- (b) Upgrade Leisure Drive from Darlington Drive to about 200m past Winders Place
Total Cost \$510,000
- (c) Upgrade Leisure Drive from Fraser Drive to Eucalyptus Drive
Total Cost \$600,000

Draft Version 4.7 amends the works programme by the addition of a new bridge over Cudgen Creek, Kingscliff (*this draft was abandoned*).

Version 4.8, effective 13 July 2004, amends Table 5.1(a) "Works Schedule" and Schedule 6 "TRDS Project Costings" by deleting item 22 and substituting existing item 23 with:

"23. Const McAllisters Rd on existing alignment Total Cost \$856,300

Version 4.9, effective 19 July 2005, amends Table 5.1(b) "Works Schedule" and Schedule 6 "TRDS Project Costings" by adding items 141 and 142:

"141. Shallow Bay Drive to Eastlakes Drive connection Total Cost \$341,554

142. i/s - Amber Road and Machinery Drive Total Cost \$190,147"

Version 5.0, effective May 2007, updates the works program and cost estimates, and adjusts sector boundaries.

SCHEDULE 5 – WORKS SCHEDULES

Unit Rates

SCHEDULE 5 Costs and works descriptions

These rates are linked directly to the project spreadsheet. Any changes in this spreadsheet will flow directly through the project spreadsheet except as indicated.

Description	Class	Type	Rate \$/m2	Rate \$/m	Estimate \$/item	% Total Project Cost	Description	Examples
RURAL ROADS	1	Rural Type D (11m Seal)	\$ 65				Formerly Type C; No significant Earthworks (assumed CBR8 and total pavement thickness of 250mm), Av Drainage (Rural Neighbourhood Connector. Nominal minum width of formation = 9.6m)	
	2	Rural Arterial (13m Seal)	\$ 78				Formerly Type D; No significant Earthworks (assumed CBR8 and total pavement thickness of 250mm), Av Drainage (Rural Arterial Nominal minum width of formation = 11m) (+20% of type D)	
	3	Earthworks Allowance				50%	For significant earthworks (including cut/fill/subgrade treatment, lower CBR and higher pavement thickness, retaining walls etc)	
	3.1	Earthworks allowance (minor)	\$ 40					
	4	Upgrade to Type D (11m Seal)	\$ 41				Widening and strengthen to Type C (35%-65% of costs)	
	5	Upgrade to Rural Arterial (13m Seal)	\$ 50				Widening and strengthen to Type D (35%-65% of costs)	
URBAN STREETS	6	Base Urban Road (BUR) - 2 Lanes (11m Seal)	\$ 95				Includes earthworks, K&G + minor long drainage, pavement	
	6.1	Base Urban Road (BUR) - 4 Lanes (23.4m Seal, i.e. +12.4m)	\$ 95				Includes earthworks, K&G + minor long drainage, pavement.	
	6.2	BUR - Earthworks	\$ 40					
	7	Var 1 BUR (semi-rural)	\$ 81				BUR with reduced drainage component (85% of costs)	
	7.1	Var 2 BUR Drainage only	\$ 10					
	8	Var 3 BUR (widening, strengthening)	\$ 75				BUR with no drainage component ie widening and strengthening only (55% of costs)	
	9	Concrete (220mm)	\$ 120				220mm thick, Reinforcement and M40 Concrete + 100mm N10 Sub-Base	
BRIDGES	10	<50m span (simple)	\$ 3,000				(\$2500 - \$3500)	
	11	>50m span (simple)	\$ 4,500				(\$3500 - \$4500)	
	12	Skewed				30%	Additional cost	
INTERSECTIONS	13	Channelisation (basic)			\$ 75,000		Traffic calming etc	
	13.1	Channelisation (complex)			\$ 120,000		Complex protected turn	Crescent and coast Road
	14	Roundabout (small)			\$ 80,000		Single lane, No earthworks, no service relocations, 12.5m OD, minimal approach works, mountable kerb	
	14.1	Roundabout (medium)			\$ 155,000		Two lane, No earthworks, no service relocations, 20m OD, minimal approach works, semi-mountable kerb	Elrond and turnock
	14.2	Roundabout (Large)			\$ 350,000		Four lane, No earthworks, no service relocations, 30m OD, minimal approach works, non-mountable kerb	Darlington and Leisure Dr
	15	Intersection (Complex)			\$ 350,000		Single lane built under high traffic, multi lane in greenfield. No earthworks, includes drainage	Kennedy Dr intersection
TRAFFIC LIGHTS	16	Basic			\$ 205,000		Including 10yr maintenance paid up front to RTA. Three way intersection. No protected turning bays. Eg T-Intersection. \$125K + \$80K 10 Year RTA maintenance costs	Leisure/Fraser dr; Fraser/Eucalyptus; Machinery Dr
	16.1	Complex			\$ 280,000		Including 10yr maintenance paid up front to RTA. Four way intersection with protected turning bays. Eg Cross Road Intersection. \$200K + \$80K 10 Year RTA maintenance costs	
	17	Pedestrian Crossing Lights			\$ 15,000		Lit Signalised Pedestrian Crossing	
TRAFFIC FACILITIES	18	Refuges			\$ 10,000		Island, linemarking, signs	Machinery Dr
	19	Thresholds or Slowpoints			\$ 25,000			Coast Road
	20	Noise Barriers (Basic Wood)		\$ 150			Timber Paling <4m	
	20.1	Noise Barriers (Complex)		\$ 300			Steel, Concrete Panels, >4m	
STREET LIGHTING	21	Intersection			\$ 25,000		Typical lighting	
	22	Route Lighting		\$ 126				
VALUATION OF EXISTING ROADS	23	Gravel roads	\$ 10				Valued over existing formation width (Gravel resheet). Maintenance costs of wearing course only.	
	24	Rural roads	\$ 25				Valued over existing formation width (Rip and resheet 2 coat seal). Maintenance costs of wearing course only.	
	25	Urban streets	\$ 30				Valued over existing formation width (Rip and resheet 25mm AC). Maintenance costs of wearing course only.	
	26	Urban streets with AC overlay	\$ 35				Valued over existing formation width (Rip and resheet 50mm AC). Maintenance costs of wearing course only.	
SERVICE RELOCATIONS	27	Relocation (standard)			\$ 25,000		Typical relocations (\$15000 - \$20000). Basic Telstra (local) cables, bsic power cables	
	28	Relocation (significant)			\$ 45,000		Larger installations (does not include fibre optic cables or high voltage power, sewer (gravity) etc.	
	28.1	Relocation (rural)			\$ 5,000			
	29	Complex				30%	Additional costs to service relocations	
PROVISIONAL ITEMS	30	Provisional Items			Lump Sum		Uncertainties in design, ground stability and environmental constraints. Specific Risks	
PLANNING/PRELIMINARY DESIGN	31	Start up costs				10%	Preplanning and strategic studies, EIS and part 5 planning applications, acquisitions, design and investigation, supervision/management (traffic or enviro)	
DETAIL DESIGN AND INVESTIGATION	32	Standard cost				6%		
SUPERVISION	33	Standard cost				3%		
LAND ACQUISITION	34	Valuer General unimproved land value prorata					Taken from current Valuer General unimproved land values	
SERVICES AND OTHER	35	Services and Other			Lump Sum		All estimated items to be indexed by Construction Price Index (approx3%) annually with review every 5 years (I.e. 2006 - 1997 = 6 years @ 3% = 1997 amount X 1.31). Geotechnical costs = 2 x road costs; Environmental Costs = 2 x Road costs.	
CONTINGENCY	36	Contingency				15%	Unidentified Risk	

TWEED ROAD CONTRIBUTION PLAN (TRCP) 2006 Version 5.0 REVISION

KEY

SCHEDULE 5 Works Schedule

	Completed Project. (These values are not linked to the Unit rate spreadsheet. Red values have been taken from actual contracts or previous TRCP values, non red values are based on estimates only)
	Detailed Estimate (These values are linked to the Unit rate spreadsheet, except where indicated by red text)
	Preliminary estimate (No colour). Linked directly to Unit Rate spreadsheet
Actual Costs	* Red Values represent actual completed costs or values not linked to the "Unit Rates" spreadsheet and are based on actual costs or detailed estimates. * Preliminary Planning and Design costs (10%) and Contingency costs (15%) have not been included for Completed Projects or Detailed Estimate costs (ie have only been included in Preliminary Estimate costs).
Detailed Estimate	Estimate from detailed design and schedule of rates. Not linked back to Unit Rate spreadsheet.
